## Profile of the Faculty

The Faculty of Electrical Engineering and Information Technology of STU is one of the seven faculties of the Slovak University of Technology, the oldest and largest university of technology in Slovakia. Its substantial lines are modern, internationally accepted university study, intensive scientific and development research and cooperation with academic and industrial partners in Slovakia and abroad.

The beginnings of the Faculty of Electrical Engineering and Information Technology are dating back to the year 1940, when by the Government Decree at the Slovak University of Technology was established the Department of Mechanical and Electrical Engineering. By the opening the Department of Electrical Engineering in the year 1941, actually began the history of electrical higher education in Slovakia. In the year 1994 the Faculty of Electrical Engineering was renamed to the Faculty of Electrical Engineering and Information Technology.

Faculty of Electrical Engineering and Information Technology of STU in the long term ranks among the largest educational institutions in Slovakia and in the area of education of technical engineers has a long tradition. The Faculty of Electrical Engineering and Information Technology of STU is also the largest educational faculty focused on the raising of the university – educated professionals in the field of electrical engineering, informatics and information technologies. Study programs with their composition reflect the technical development as well as trends in society. They consist of interlinked system that highly covers the needs of labor market in Slovakia and abroad. Many of our graduates have found application as top professionals in the field and perform also top management positions.

In addition to gaining high – quality knowledge during the study students are in a position to be involved in the process of solving of research projects and also projects for commercial purposes. This may begin their careers already during their studies. Students of the faculty thereby are able to receive the possibility to complete a part of the study at foreign universities with which the

Faculty of Electrical Engineering and Information Technology have signed agreements on bilateral cooperation. The Faculty at the same time develops cooperation in research and technological cooperation with universities abroad. Year after year a relatively large group of the students completes one or two semesters at one of technical universities abroad.

By completing any of the Faculty study programs it is possible to gain an excellent potential for a good quality job in a wide spectrum of professions. Employment figure of the graduates of the Faculty comes up to hundred percent every year. This means a great prospect ahead for students within Slovakia and the European Union.

The Faculty of Electrical Engineering and Information Technology of STU consists of the seven institutes and two departments:

- Institute of Computer Science and Mathematics (ICSM) was established on May 1, 2011 and created from: Department of Applied Informatics and Information Technology and Department of Mathematics
- Institute of Control and Industrial Informatics (ICII) was established on March 3, 2006 by a fusion of three departments: Department of Automation and Control, Department of Automatic Control Systems and Department of Economics and Management, the last one being detached from the ICII in April 1, 2007.
- Institute of Electrical Engineering (IEE) was established on May 1, 2011 and created from: Department of Electromagnetic Theory and Department of Measurement.
- Institute of Electronics and Photonics (IEP) was established on May 1, 2011 and created from: Department of Microelectronics and Department of Radio and Electronics.
- Institute of Nuclear and Physical Engineering (INPE) was established on May 1, 2011 and created from: Department of Physics and Department of Nuclear Physics and Technology.

*Lecture of Dr. John Cohn*  
– American propagator of the science,  
innovator and holder of 50 patents

*Lecture of Prof. Július Krempaský*  
– Slovak scientist and university teacher, holder of the Prizes  
of Ministry of Education of the Slovak Republic for Science  
and Technology and Slovak Academy of Sciences  
for the Popularisation of Science

- Institute of Power and Applied Electrical Engineering (IPAEE) was established on May 1, 2011 and created from: Department of Electrical Machines and Devices, Department of Electrical Power Engineering, Department of Electrotechnology and Department of Mechanics.
- The Institute of Telecommunications (IT) was established on May 1, 2011 and was created from previous: Department of Telecommunications.
- Department of Languages (DL) was established on April 1, 1991.
- Department of Physical Education (DPE) was established in the year 1993.

The primary goal of Faculty institutes and departments is to link high quality education with research and development. Faculty of Electrical Engineering and Information Technology of STU in Bratislava has sustained its position as a major centre of research and development.

Information and telecommunication systems and technologies, electronics and electrical engineering and their applications, automated systems and methods of their control, power and nuclear engineering are considered as the most important scientific and research areas at FEI STU. Science and research at the Faculty of Electrical Engineering and Information Technology have to be primarily oriented on them.

As far as grant success rate is concerned, the Faculty belongs to the most successful institutions in Slovakia. This position must result in the quality that will be reflected in national and international projects, publications in CC international scientific journals, quotations, patents as well as participation of the Faculty teachers and researchers in practical applications of the latest technologies as well as in creating new development concepts of different sectors of Slovak national economy.

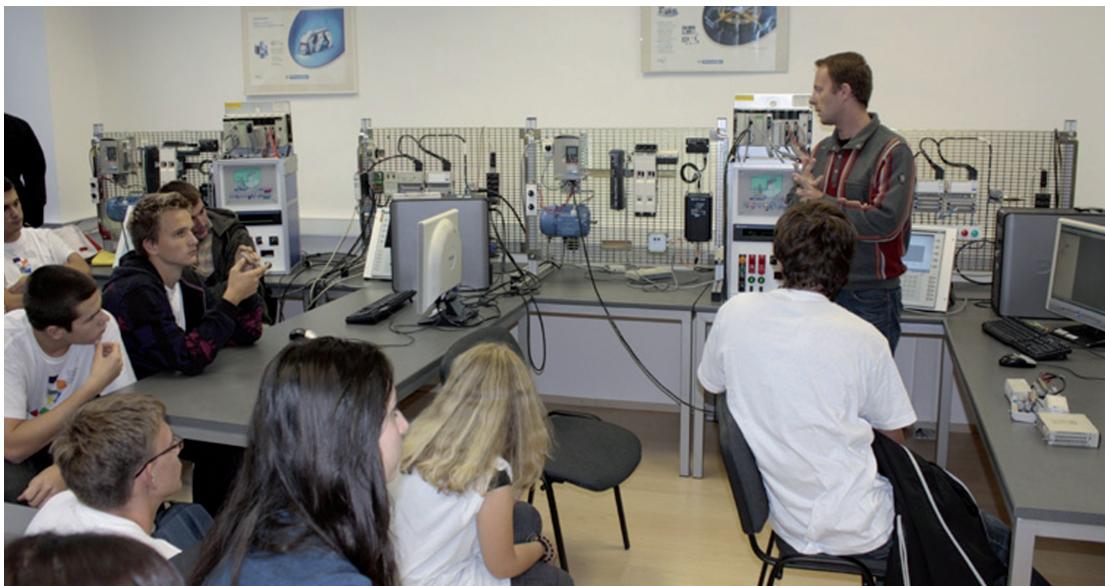

In the area of science and research the Faculty is also focused on funding science and research by involving Faculty staff in all forms of VEGA, KEGA and APVV projects, competence centers, centers of excellence, EU framework programs, bilateral and other international projects, government contracts as well as by funding from other sources. The main focus is also on the involvement of undergraduate and postgraduate students in research at the Faculty and in research centers in Slovakia and abroad. The number of PhD Students who have successfully completed their studies at FEI also represents a measurable indicator of quality. Quality is also reflected in individual teachers' and researchers' efforts the Faculty can benefit from.

This year the Faculty of Electrical Engineering and Information Technology celebrates the 70th Anniversary of Education in the field of Electrical Engineering and Computer Science.

## General Information

On May 1, 2011 was established the Institute of Computer Science and Mathematics as a union of two former Departments at FEI STU, namely Department of Informatics and Information Technology and Department of Mathematics. In fact we can count our history from the creation of the Department of Applied Informatics and Information Technology at FEI STU on Feb 1, 2004. 526 Bachelors, 249 Masters (Engineers) and 8 PhD Students have finished during this short period. The study program Applied Informatics possesses deep theoretical and methodological knowledge and practical skills from the essential areas of the core of Informatics. Further knowledge from measurement, data capture, processing and transmission of information and diagnostics of systems is included to the program. A graduate will also have knowledge about information and communication networks, will understand methods of modeling and simulation of systems and processes. To achieve this target, courses from the core fields of Information Systems and Software Engineering interlace with courses divided into four majors: Security of Information Technologies, Biometrics, Modeling and Simulation of Event Systems, and IT in Control and Decision Making. During the study principles of individual and team scientific work and research, formulation of problems, their solution and presentation are emphasized, respectively. A broad

professional career in the different branches of science, research, industry and services is open for graduates, like auditing large information and communication systems, design security systems to protect sensitive data, modeling of work-flow processes, and embedded systems, and design and use information systems and software products in the area of control engineering in various practical application domains. The Institute consists of 3 Departments, namely Department of IT Security, Department of Software Engineering and Department of Mathematics.

## Departments of the Institute

### Department of IT Security

**Department chair:** doc. Ing. Pavol Zajac, PhD.

Tel: +421-2-602 91 181

e-mail: pavol.zajac@stuba.sk

Fax: +421-2-654 20 415

### Short history

The cryptology education at EF SVŠT began in 1984 with a course „Secret Communication in Computer Networks“ for postgraduate study (PhD) as the first in former Czechoslovakia. In 1986 O. Grošek (EF SVŠT) and K. Nemoga

(MÚ SAV) established a new research seminar CRYPTO, and except a short break 1989-1993, it is still a main center of cryptology research at FEI STU. In 1995 started a course Ciphering for students, along with the first Bachelor's projects and Diploma Theses in this area. Since the same year we had graduate students in the field of 25-11-9 Applied Informatics, and also (since 1997) 11-14-9 Applied Mathematics with the major Cryptology.

The first Masters degree programme in the field of Security of Information Technologies was established in 2000/2001 by the Department of Mathematics in cooperation with the former Department of Applied Informatics and Information Technology. After the creation of FIIT STU in 2003, the cryptology group of prof. Grošek created a core of the Department of Applied Informatics and Information Technology at FEI STU on Feb 1, 2004. On May 1, 2011 the Institute of Computer Science and Mathematics was established as a union of two former Departments at FEI STU. Since that time Crypto-group has formed the core of the Department of IT Security.

### Awards 2012

- Ing. Viliam Hromada: A Note on Poly-Dragon, conference ELITECH ,12, SR, winning work in the section of Applied Informatics

### Activities 2012

- Organization of Central European Conference on Cryptology 2012.- TatraCrypt 2012, Smolenice, SR, 02.-04.7.2012

### Directions, Future Trends, and Priorities

In the year 2012 we were able to increase the involvement of the Department in various research projects. The main research priorities indicated by the projects are:

1. side channel attacks (APVV, and NATO grant)
2. security of mobile devices (VEGA grant)

In 2013 we plan to improve the Laboratory of IT Security with the help of sponsors to include the measurement devices for the side channel research.

We continue the continual improvements of the educational process. We investigate the option to introduce new courses for students of non-security specializations. Furthermore, we try to increase the involvement of security-specialized students in our research activities.

## Department of Software Engineering

**Department chair:** prof. RNDr. Gabriel Juhás, PhD.  
Tel:+421 2-602 91 135  
e-mail: gabriel.juhas@stuba.sk  
Fax:+421-2-602 91 415

### Short history

History of the Department of Software Engineering began in February 2004 along with the development of the Department of Applied Informatics and Information Technology to teach students in the field of Advanced Web Technology. In September 2005 there was established a group of associated professor Juhás working in modeling, analysis, synthesis and verification of a wide range of event systems in various application areas. Other fields of research are architecture and software development, biometrics, eHealth and telemedicine. The first Master's degree student in the field of Modeling and Synthesis of Event Systems finished in 2009. In 2011 the group became a part of the Institute of Computer Science and Mathematics, and was named Department of Software Engineering. Machine Learning Group is active at the Department of Software Engineering, Institute of Computer Science and Mathematics. It consists of university teachers and PhD students at the Department, who together with the undergraduate students work mainly in the following areas:

- machine learning for biometrics
  - face recognition
  - iris recognition
- machine learning for communication networks
  - classification of traffic in communication networks
  - prediction of video traffic in communication networks

Machine Learning Group cooperates closely with the partners performing research in the above mentioned areas in Slovakia, as well as abroad, e.g. Politecnico di Torino (<http://www.polito.it/>), Vrije Universiteit Brussels (<http://www.vub.ac.be/>). Through Group's involvement in HBB-Next 7th Frame Programme project (<http://www.hbb-next.eu>) it closely cooperates with both the academia and private companies throughout Europe.

All the relevant information about Machine Learning Group (people, software systems, scientific projects, publications) can be found on its homepage <http://www.uim.elf.stuba.sk/kaivt/MLgroup>.

### Awards 2012

### Activities 2012

- Support for organisation conference - Algorithms and Tools for Petri Nets (AWPN 2012), Vienna, Austria, 13.-14.9.2012

### Directions, Future Trends, and Priorities

Telemedicine represents innovative shift in delivering medical services with application of information and communication technologies outside the health institutions. Applications of telemedicine services include mobile and wearable technologies to support tele-health for

management of chronic conditions and support general well being from infants to elderly. Other domains of tele-health systems research (including nonclinical domains) are in the scope of ongoing efforts to create the ground for identification and discussion of technological, social, cultural, economic and other drivers to gain wide acceptability of telemedicine services and systems.

National Centre of Telemedicine Services (NCTS) was opened on 1.12.2011 at Slovak University of Technology in Bratislava, Faculty of Electrical Engineering and Information Technology (FEI STU). A strategic partner of the NCTS is IBM Slovakia with important support to the Centre from Slovak Medical Chamber and WHO office in Slovakia.

Research and development in the Centre is aimed on "the complete loop system" including remote data collection (biomedical telemetry devices), data transmission and analytics to support experts review and feedback to medical personnel and patients. International state-of-the-art in related research domains is delivered through the close collaboration with distinguished experts in the field of biomedical engineering and health informatics – prof. Cerutti, prof. Allen, prof. Zhang (CUHK, China), prof. Akay (UH, USA) and other researchers grouped under NCTS's Scientific Advisory Board.

Tele-monitoring services are developed by the NCTS with close cooperation with its medical partners include acquisition of vital signs related to, e.g. blood pressure, body temperature, glycemia, ECG. The complex picture of patient status is completed with GPS data and VOIP tele-consultations. Management of patient conditions is supported by clinicians' applications related to management of acquired data and alarm generation supporting the prompt feedback to the patient and provision of professional help. The specific characterization of application is based on the requirements of medical personnel, related clinical process and target group (for example diabetes management, elderly citizens).

## Department of Mathematics

**Department chair:** doc. RNDr. Ľubomír Marko, PhD.

e-mail: lubomir.marko@stuba.sk

Tel: +421-2-654 27 351, Fax: +421-2-654 20 415

### Short history

The origin of the Department of Mathematics is the same as the origin of the Slovak Technical School of M.R. Štefánik (1938) and the first rector was a mathematician Jur Hronec too. In 1951 the Institutes of Mathematics were united into the unique Department of Mathematics of Slovak University of Technology (SVŠT), which was associated to Faculty of Electrical Engineering of SVŠT (EF SVŠT). The first head of the Department of Mathematics became academician Š. Schwarz. In 1984 the residence of EF SVŠT moved to Mlynská dolina (Bratislava). We remember famous researchers to be employed at the Department, namely professors

Hronec, Schwarz, Jakubík, Švec, Greguš, Mišík, Kluvánek, Riečan, Znám, Eliáš, Ivan, Šulka, Gatial, Porubský, Horák, Riečanová. In 2011 the Department of Mathematics was incorporated to the Institute of Informatics and Mathematics.

### Directions, Future Trends, and Priorities

- Increased grant funding of the department.
- Continual improvement of educational process in mathematics.
- Improvement of pedagogical work with students, especially in the first semester.

## General Information

Institute of Control and Industrial Informatics (ICII) is one of the top university institutes in Slovakia in the field of automation and control, industrial informatics, cybernetics, robotics and mechatronics. ICII was established in 2006 and consists of the former Department of Automation and Control, and the Department of Automatic Control Systems.

ICII is a technical guarantor of accredited study programmes Industrial Informatics (Bc), Applied Informatics - application domain Information Technologies in Control (Bc., Ing.), Cybernetics (Ing.), Robotics (Ing.), Applied Mechatronics (Ing.), and Applied Mechatronics (PhD.), Automation and Control (PhD.), Cybernetics (PhD.).

The basic research at ICII has been oriented to optimal control, decentralized, adaptive, robust and predictive control of complex systems, soft computing methods in control, and recently also to network and robust hybrid control approaches. The main application areas are drive systems, robotics, power engineering, manufacturing, and process engineering. Individual research teams prove their expertise by a rich publishing activity including international journals, monographs, and proceedings of important world-wide international conferences (IFAC, IEEE, ECC, etc.)

## General Information

The Institute of Electrical Engineering FEI STU is a direct successor of the Institute of Theory and Experimentation in Electrical Engineering at the Slovak Technical University (SVŠT). This Institute was the first establishment of the Department of Electrical Engineering at the Faculty of Mechanical and Electrical Engineering of SVŠT in Bratislava and hence, it became the foundation institution for education of electrical engineers in Slovakia. This institute was constituted together with the Faculty in 1941 and thus its 70th anniversary was celebrated last year. The founder of the Institute was Prof. Dr. Ing. Ľudovít Kneppo, DrSc. who was also appointed the first Dean of the Faculty of Electrical Engineering at SVŠT, after it gained its autonomy. Right from the beginning, the Institute addressed all theoretical and engineering aspects of electro-technology including measuring methods which were an integral part of the branch. Due to the broad scope of its scientific profile, several departments and working groups were formed within the institute. In the 1950s the Institute was renamed to Department of Theory and Experimentation in Electrical Engineering (KTEE) and as such it existed until 2011. The Group of Electrical Measurement was gradually extending its profile. The initial year of education in the area of Measurement Technology, branch of Technical Cybernetics was 1974. Due to the growing volume and extent of work

both in teaching and research, the foundation of a separate Department of Measurement became inevitable. This happened by the split of KTEE in 1980, when the Department of Measurement (KMER) was established. On the 1st May 2011 these two departments merged and gave rise to the Institute of Electrical Engineering which concluded the evolution by returning to its roots after 31 years.

# General Information

The Institute of Electronics and Photonics is active in microelectronics, nanotechnology, wireless communication, IC and system design and test, signal processing, optoelectronics, photonics, sensors, power electronics, organic electronics, and multimedia techniques. EUROPRACTICE membership provides access to advanced modelling and simulation, as well as IC and system design tools (Synopsys, Cadence, Mentor Graphics etc.). Structure and

device characterization and failure analysis using electrical measurement (I-V, C-V, DLTS, and microwave measurement in a wide temperature range with optional magnetic field) or analytical techniques (SEM, EBIC, CL, AES, AFM, SIMS, micro-Raman spectroscopy) supported by process and device simulation and modelling is an important and strong field of the institute activities.

The research using the tools and techniques above and clean rooms (ISO 5) equipped with new technological equipment is focused mainly on GaN devices, thin film sensors, diamond layers and carbon nanotubes and rapidly growing investigation of organic LEDs and transistors.

Application of advanced electronic systems mainly for biomedical measurement, healthcare and environment is strongly supported area of interest of the institute. Using impedance sensors prepared and the ASIC designed at the institute wireless human stress meter has been developed and prototyped. Another team developed wireless sensors based on microsystems produced at the institute and standard microprocessors for biomedical measurement (EMG, ECG, EEG).

The well-equipped laboratories, expertise and enthusiasm of the institute staff as well as focussing on the most advanced technologies ensure the successful solution of scientific and applied research projects. The fact that the institute has been involved since 1990 in more than 30 EU funded projects supports the statement.

## General Information

A main objective of the Institute of Telecommunications is to integrate and in a procreative way evolve content-related educational, scientific, research, experimental and other professional activities. The IT guaranties subjects of the education within the scope of accredited educational programs provisioned at the Slovak University of Technology. By means of educational, scientific, research, experimental and other professional activities, the Institute of Telecommunications is responsible for development of following areas: telecommunication systems, networks and services, the signal processing and multimedia.

Telecommunications are a relatively young program consequential on long-time work and experience. Students take a high concern in the study of Telecommunications and their practical applications are extraordinary in Slovakia and abroad. The pedagogical activity of the Institute of Telecommunications involves the bachelor degree program (Bc.), the master degree program (Ing.), the doctoral degree program (PhD.) and the whole-life education.

The Institute of Telecommunications aims at sustaining its position as a major centre of science and research. By its scientific and professional activities, the IT belongs to progressive teams – the Vice-premier of SR and the Minister of Education "Scientific and Technological Team of the Year" Award, the "EUROPROJEKT 2011" Award. Workers of

the IT are members of many expert technical committees. The IT solves multiple scientific, technical, government and international projects and has long-time fellowships with telecommunication companies and research institutes in Slovakia and abroad. The IT makes initiatives for participating in European scientific and educational projects. The IT actively supports a development and a popularization of new telecommunication technologies by organizing and co-organizing of international conferences and workshops. A quantity of valuable scientific publications in foreign and national scientific and professional journals and in proceedings from significant international scientific conferences shows evidence of the high professional level of the IT FEI STU members.

## General Information

Office for European Union Programmes (OEUP) at Faculty of EE & IT (FEEIT) has been operating since its establishment in 2000 as an autonomous Office of this Faculty. The main task is to support and develop international collaboration in the area of educational, research, cultural and entrepreneurial activities with an aim to increase the participation of groups and individuals mainly from FEEIT in international projects and to secure an effective development of human resources at FEEIT. Into the scope of the OEUP also belongs a preparation of international projects including a generation of professional and financial conditions for execution of international mobility for STU graduates.

OEUP activities could be summarized as follows:

- Organization and carrying out international mobility programmes for STU graduates
- Search for new forms of international collaboration including a new project proposal preparation within EU programmes and further elaboration of contacts with abroad
- Active collaboration and cooperation within national and international projects with other Slovak Universities
- Further development of contacts with non-governmental organizations mainly in the area of education and research, deepening of contacts with state and

private organizations in the area of education, research and collaboration with industry

- Advisory and consulting service in the area of preparation, submission and management of EU projects, including organization of seminars and training
- Help in search for domestic and foreign partners for projects within EU programmes
- Coordination of international research, education and other project preparation
- Communication with National Agencies and National Contact Points for individual EU programmes
- Advisory and consulting activity within preparation and carrying out of events with foreign participation (workshops, seminars, conferences, etc.)
- Preparation of events initiated by foreign partners

OEUP itself has coordinated and was carrying out educational, research, supporting and other projects.

Leonardo da Vinci program mobility projects, granted to OEUP, represent for STU graduates a significant milestone in their professional life. This is happening also thanks to professional preparation of these specialized stays by OEUP.

OEUP is acting also in Leonardo da Vinci LLL program focused on vocational training (students, teachers of vocational/high schools oriented to ICT, as well as on vocational training of staff of ICT companies and further institutions).

## General Information

The history of teaching foreign languages at FEI started on 1 April 1990 when the Department of Languages was established. This decision was made to link language education more closely with Faculty students' specific needs, while before this date foreign language teaching was provided by the all-university Department of Languages. On 1 December 2012 the Department was renamed to the Institute of Communication and Applied Linguistics.

The Institute has specified the aims of foreign language teaching on the basis of extensive needs analysis carried out amongst Faculty graduates. The aims include:

- oral communication in the form of monologue or dialogue in typical situations (discussion, presentation, telephoning).
- listening for general or specific information.
- reading specialist literature.
- written communication on the corresponding level in typical genres (report, instructions, c.v., official correspondence).
- development of communicative competence not only on bilingual, but also on monolingual level.

Institute teachers have long experience in different areas of education:

- teaching in courses of further education of university teachers of foreign languages for specific purposes in Slovakia and abroad in cooperation with the British Council, education of teacher trainers of English for specific purposes in the EU in cooperation with the British Council and the Ministry of Defence of the Slovak Republic.
- e-learning education (methodology of e-learning courses design and their teaching).
- design of interactive learning materials in Moodle for the needs of bachelor and PhD Students.
- authorship of learning materials for bachelor and PhD students, as well as for general public (e.g. English for Students of Electrical Engineering, Angličtina nielen pre samoukov, Angličtina pre kurzy a jazykové školy 1,2,3, English in Need).

- expertise in the area of languages for specific purposes.
- working in the committee of UNICERT LUCE (Language Accreditation Unit for Universities of Central and Eastern Europe), accreditation of language programmes of Slovak and European universities in the accreditation system UNICERT LUCE, membership in examination boards at individual universities.

No professional can make a successful career without having mastered at least one foreign language. Its knowledge is now considered a matter-of-course in most industrial and commercial companies. Due to regional and economic specifics of Slovakia, specialists must be able to communicate in at least one foreign language, preferably more. Their professional life requires competent written and oral communication for general and specific purposes. It does not suffice to know only the grammar and vocabulary of the given language, but it is also necessary to understand the meaning of lingual and extralingual means of other cultures and subcultures. For this reason, it is important (in accordance with EU policy) to improve the education of students also in the area of intercultural communication.

## General Information

In 1993 KTV FEI STU was already situated in new premises that make it the best equipped departments in SR. The department has a small and a big gymnasium, a well equipped fitness centre, a swimming pool and a bouldering wall. Nowadays, KTV FEI STU is divided into two sections: The Section of Physical Education and the Section of Physical Education Facilities Administration. The priorities of the Department of Physical Education are:

- Instruction of physical education in daily bachelor and graduate studies, instruction of physical culture according to the faculty study programme as part of university studies
- Representation of the school at university events
- Cooperation in the development of sport movement at the faculty with the faculty management, academic bodies, faculty organisations and faculty sport clubs
- Organisation of single sport events and competitions according to the schedule of sport events
- Research activity (study of results of sport sciences, publishing, preparation of education materials and innovative elements in the field of physical education and sport, participation on research projects)

The section of physical education facilities administration is in charge of physical education facilities (regulation, maintenance and control) and of economic services (business activities, marketing).

The main activity of KTV FEI STU is the subject called Physical Culture. Its aim is to obtain the optimal motion performance of the student, to make him/her understand the importance of the lifetime physical activity as one of the key factors of health, education and work performance. During the first two terms, the subject Physical Culture focuses on physical and ball games (basketball, volleyball - basic game activities of an individual, rules), and swimming (improving the individual swimming styles, training for non-swimmers). In the remaining four terms, the students can choose from collective games (basketball, floorball, football, volleyball - improving basic game activities of an individual, simple offensive and defensive combinations, simple game systems, realisation of offensive combinations, defensive combinations and game systems in a game), individual sports (badminton, swimming, table tennis, shooting, hiking, watermanship), or other activities (yoga, fitness, aerobic, self-defence). For students that are chronically ill, KTV FEI STU offers health physical education (special exercise for traumatogenic and surgical states of lower extremities, back pain; balance exercises; yoga exercises for disabled persons, diseases of spine and joints, some allergies, hypo-immunity; individual swimming and exercises in water according to the instructions of a doctor). By selection physical education, the department prepares the representation of the faculty in sport games and individual sports. In close cooperation with the subject Physical

Culture, tens of events are organised under the patronage of the Slovak Association of university sport, sport unions and associations in the Slovak Republic.

Physical education and sport are social and political necessities. It is a phenomenon that can move the whole world. The Department of Physical Education tries to mediate this phenomenon to students and employees of FEI STU and to enrich their private and professional life.

Based on the decision of the Dean of FEI STU with effect from 1st December, 2012 the name of KTV FEI STU has been transformed to Technological Institute of Sport (TIS FEI STU).

The Center cooperated with the European Association of Distance Teaching Universities and the European Association of Institutions in Higher Education on completing an LLL Promoters project application aimed at enhancing lifelong education at universities. The Center cooperated on the admission of the IN-STU-d-ING project as part of the operating program to build up the study program Applied Mechatronics in English language. The Center cooperated on formulation of the research project within the 7th framework program MetaLab focused on supporting distant laboratories. (not approved). Publication of textbooks for distance study belongs to regular activities of the Center.

## Center of Nuclear Technologies (CNT)

**Head: prof. Ing. Vladimír Nečas, PhD.**

The CNT offers own capacity and equipment for material physics, analyses of various materials used in practice: a) analysis of standard and special materials using nuclear physics methods (Mössbauer Spectroscopy, Positron Annihilation Spectroscopy, Gamma Spectroscopy) from the point of view of knowledge, not only properties (structural, magnetic, radiation, etc.) but also the processes running inside; b) the ion beam modification of materials using particles accelerator for microelectronics, optoelectronics, nanotechnology and nuclear energy; c) the X ray digital imaging of different subjects by means of innovative semiconductor detectors in various areas of medicine, industry and safety. CNT offers participation also in the projects of the safe use of nuclear energy, in research and development of novel nuclear technologies (reactors of 4th generation, thermonuclear reactor), computer modeling and simulation of neutron-physical characteristics of VVER-440 reactors, nuclear fuel cycles, optimization of blocs operations and their nuclear safety. We offer analyses of radiation environmental influences, including problems connected with decommissioning of nuclear power plants.

## Mutual Workplace for Special Measurements and Electromagnetic Compatibility

(in cooperation with the Institute of Electrical Engineering and Projects, Nová Dubnica)

### **Head: doc. Ing. Karol Kováč, PhD.**

The HiTech Center for Electromagnetic Compatibility has been established as part of the state science and research program "Complex Solution of Support and Effective Use of Research and Development Infrastructure" called "Support of Research and Development from the Viewpoint of Electromagnetic Compatibility" that was completed by final opponency in October 2011. The Center is located at FEI STU. Its workplaces are the EMC laboratory of the Institute of Electrical Engineering and the Mutual Workplace for Special Measurements and Electromagnetic Compatibility in the Institute of Electrical Engineering and Projects in Nová Dubnica. The faculty counseling workplace of the Center is aimed at supporting research and development in the EMC area. The scope of its activities reaches from specialist counseling, computer modeling of EMC phenomena, subsystems and systems to verification of EMC features of prototypes of electronic systems. For all of these activities it is equipped with technical and programming facilities on top European level. Every year, the Center provides support to 45 projects of scientific and research organizations in Slovakia.

## FEI STU Test Laboratory

### **Head: doc. Ing. Karol Kováč, PhD.**

FEI STU Test Laboratory is a certified test workplace (SNAS Certificate No. S-066) that is authorized to test electrical, protective and work equipment for electrical engineering, electrical products, light sources, lamps and optical materials as well as measurements of physical values in environment in general and in working environment– lighting measurements.

It is authorized to test high voltage technology, electromagnetic compatibility and lighting technology. More than 150 certified tests based on clients' requirements were carried out in 2011.

## National Center of Knowledge Data Structures - Archetypes

### **Head: Ing. Martin Foltin, PhD.**

The main task of the Center is to bring, naturalize and further develop standards of health informatics in the field of structured records of providing health care in cooperation with the National Health Information Center. Since it was established, the Center has provided a set of applications and tools for development, location and management of open data standards – archetypes as well as interconnection of the Center with international structures run by a worldwide foundation OpenEHR. More than 70 countries and thousands of specialists – doctors and information science specialists cooperate with the OpenEHR foundation on the creation of archetypes and their implementation in information systems of health care institutions.

The Center has established a board of experts on health service standards. It will gradually engage professional medical workplaces in its activities and will launch activities aimed at the preparation of first archetypes, localized for the needs of the National Health Information System in accordance with eHealth projects in Slovakia. At the same time, the Center expects intensive cooperation with manufacturers of information systems in the solution of tasks linked with the implementation of electronics and IT support of health service. Standards and archetypes developed by the Center will be submitted to the Center for Medical Terminology and Standards of the National Health Information Center. After being approved of, they will be subsequently submitted to the Board of the Minister of Health for Medical Terminology and Standards and used for eHealth SR.
